

Facial Feature Visual Memory Game

Preparation:

You will need 2 sets of the facial features below. Cut apart the facial features below: eyes, nose, mouth, hair and separate them into 2 sets. You may want to copy them onto cardstock and laminate for durability.

Players: 2

Objective: Students will increase their visual memory skills and visual discrimination for facial features.

How to Play:

One student turns away or closes their eyes. The other student chooses one eye set, one nose, one mouth and one hairstyle. This student places the pieces together to create a face. The other student opens their eyes and studies the face for 10 seconds. The face is then covered and the 2nd student uses his/her pieces to find the matching facial features and re-create the face his partner made.
